

METASET TUTORIAL GUIDE

Microsoft Office User

METASET.AI NEW GENERATION OF TRADING

1. What is Metaset?

MetaSet is an AI company that operates in the field of artificial intelligence, creating AI robots in various domains including AI trading and AI data analytics.

MetaSet services:

1. MetaSet Telegram Bot - Metaset Signal mini app
2. MetaTrade AI Robot
3. Low Risk AI Robot
4. Risk-Free AI Robot
5. Analytics AI Robot
6. Photo Editing AI Robot (Coming Soon)
7. Arbitrage AI Robot

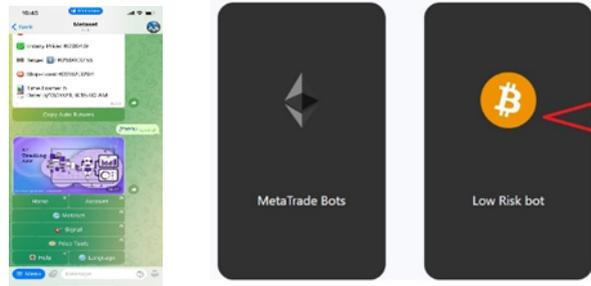

2. The price of services

- Using MetaSet's services implies a partnership with the company. MetaSet becomes a partner with you, sharing 10% of profits and up to 20% of losses.
- 10% Profit Share:
- Every user can use MetaSet's services and bots for free. When you make a profit, MetaSet deducts 10% of your profit as a service fee when you withdraw.
Example: If you make a 250% profit on 2 trades, whenever you decide to withdraw your profit, the company deducts 10% of your 250% profit as a commission and deposits 240% into your wallet.
- 20% Loss Coverage:
In case of losses in any MetaSet robot, the company covers 20% of your loss, depending on the type of bot you activated. The 20% loss is instantly transferred to your account as part of the partnership.

3. Percentage of partnership in losses with MetaSet in different bots:

- MetaTrade: 20% to 30%
- Low Risk: 10%
- Risk-Free: 100% (Capital guarantee)
- Telegram Signal Bot: 100%

4. How do Metaset's bot algorithms work?

- The algorithms of Metaset bots are designed to work based on artificial intelligence and various algorithms for data analysis, predicting market trends, and performing other tasks. These algorithms typically combine statistical methods, mathematical models, artificial intelligence, and machine learning. The main objective of these bots is to provide predictions and guidance for better decision-making by traders.
- Essentially, the bots on the Metaset website automatically trade the same signals as their Telegram bot, depending on the activation time of MetaTrade, Low Risk, and other bots on the website.
- The win rate of the MetaTrade bot is assessed based on the signals from the Telegram bot, which users can easily understand by receiving signals through the Telegram bot. The win rate of the bots on the website is a certain percentage.

For example:

If you place 10 orders in Telegram in a day, out of which 8 signals are likely to be correct and 2 signals may not be correct, the overall win rate of the signals reaches 80%. Out of 10 signals > 8 correct signals | 2 incorrect signals = 80%-win rate out of a total of 10 signals.

- It is worth mentioning that the Metaset Telegram bot generates over 100 signals per day, and all signals are recorded in the bot with accurate timestamps. The TP (Take Profit) levels of each signal have codes and are easily analyzable. You can also view the results of the signals on the blockchain.

5.Signal Order

You can order your desired signals from the list of signals in the Telegram bot and manually or copy trade on your exchange via API. This system has attracted many traders to MetaSet's artificial intelligence technology.

6. Tutorial: Registering and Using Bots on the MetaSet Website

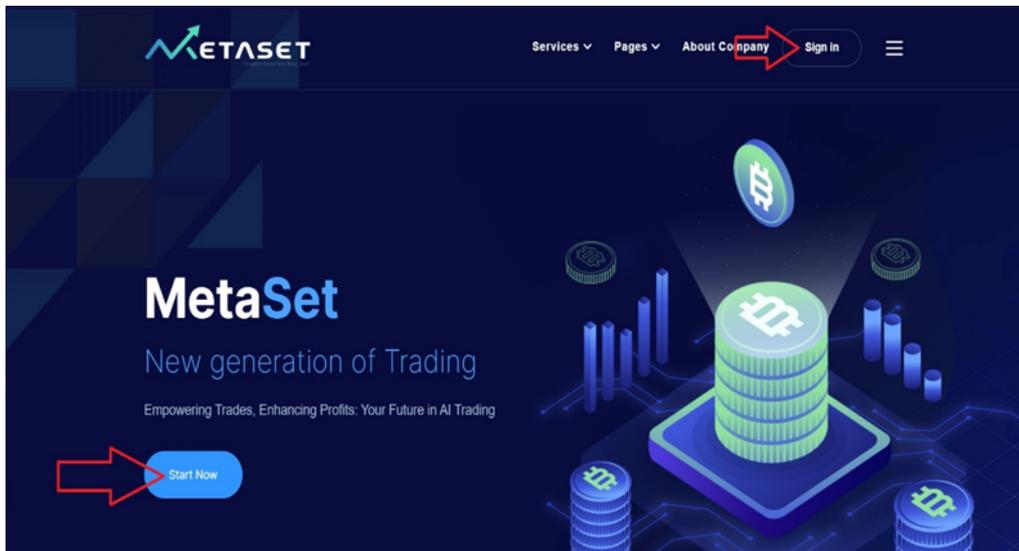

Figure 1

1. Registration:

- Visit the MetaSet website Click on the "Start Now" or "Sign Up" button.

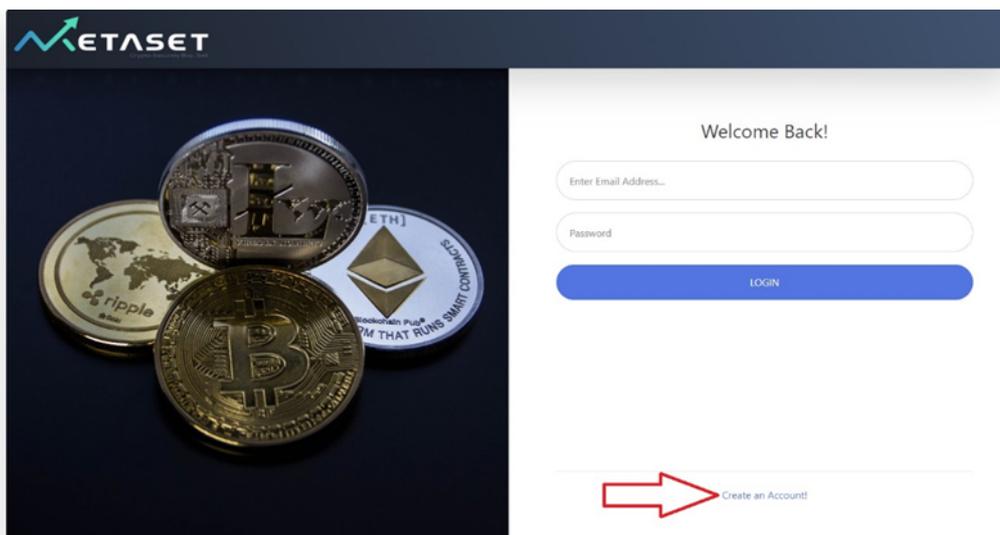

Figure 2

2. Click on "Create an Account."

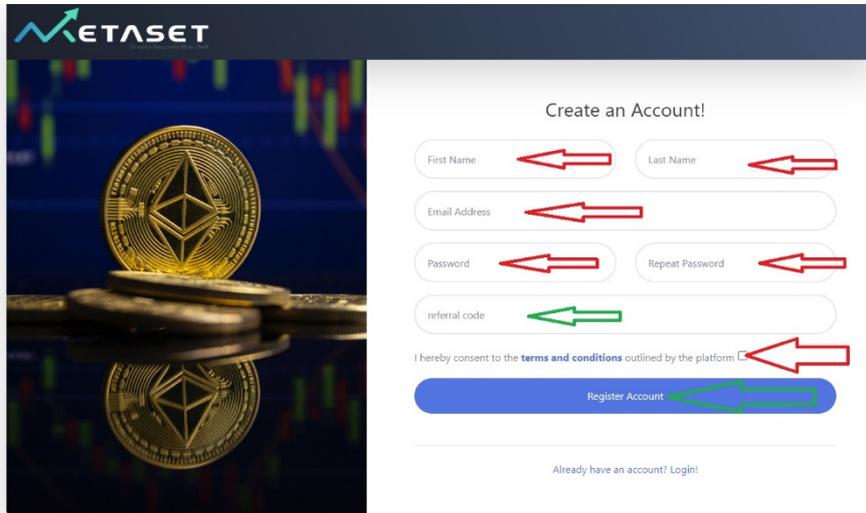

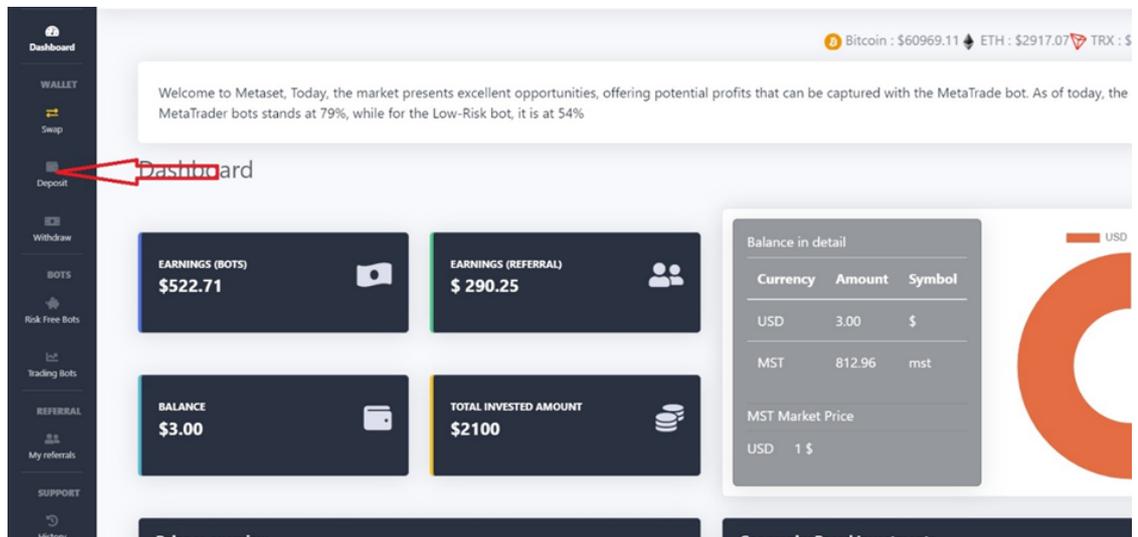

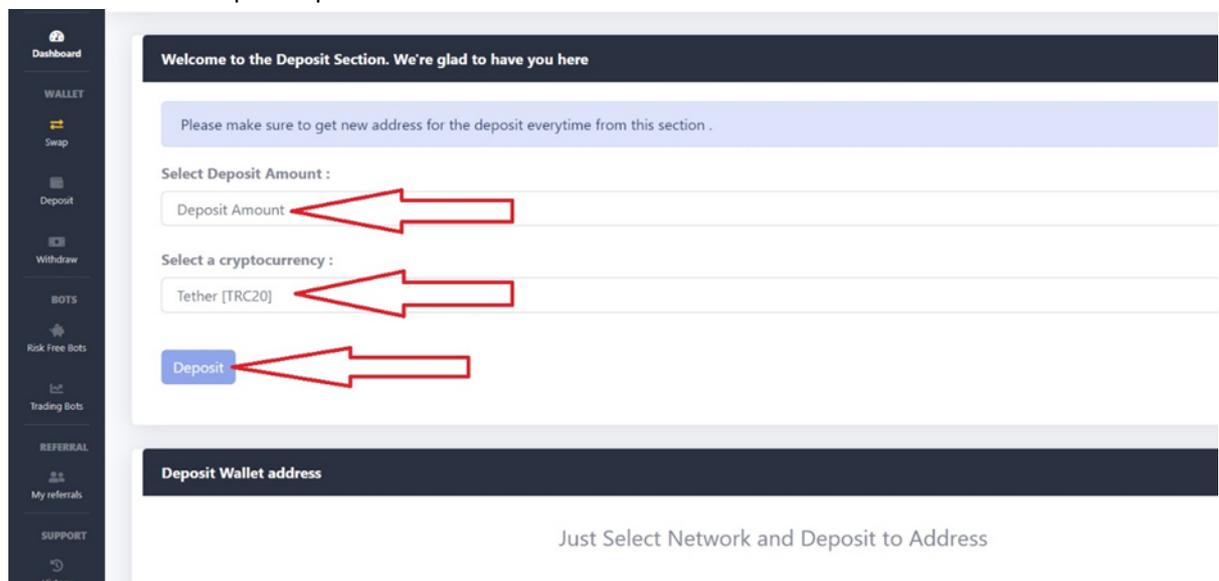

Figure 3

3. Enter your details such as your full name, email address, and choose a password. Make sure your password is at least 8 characters long and contains at least one lowercase letter (a) and one uppercase letter (A) in English.
For example: WwA123456789. Repeat your password in the "Confirm Password" field. If you have a referral code, enter it. (Optional)
Check the box for "Terms and Conditions," then click on the "Register Account" button.
Congratulations, your account has been successfully created!
Login - After successfully registering, log in to your Metaset account using your username and password.

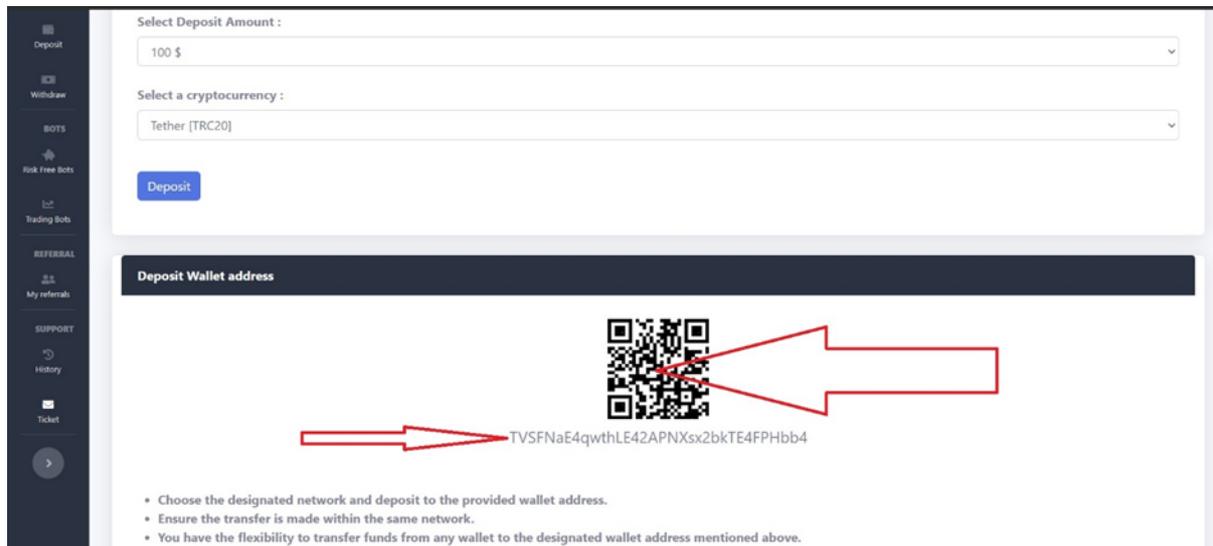

7. Deposit training on Metaset Website

- Click on the hamburger menu on the top left of the site.
- Click on the Deposit option.

- On the new page, select your deposit amount in the "Select deposit amounts" field, and in the second field, "Select a cryptocurrency," choose your deposit network.
- Then, click on the "Deposit" option to reveal the wallet address to which you should transfer your amount, and you can transfer your amount to that wallet.

The screenshot shows the Metaset deposit page. At the top, there is a 'Select Deposit Amount' dropdown menu set to '100 \$'. Below it is a 'Select a cryptocurrency' dropdown menu set to 'Tether [TRC20]'. A blue 'Deposit' button is located below the dropdowns. The main section is titled 'Deposit Wallet address' and features a QR code and a long alphanumeric address: TVSFNaE4qwthLE42APNXsx2bkTE4FPHbb4. Red arrows point to the QR code and the address. Below the address, there are three bullet points: 'Choose the designated network and deposit to the provided wallet address.', 'Ensure the transfer is made within the same network.', and 'You have the flexibility to transfer funds from any wallet to the designated wallet address mentioned above.'

Note:

For each Metaset deposit, you are introduced to a new wallet address, to which you should transfer your amount.

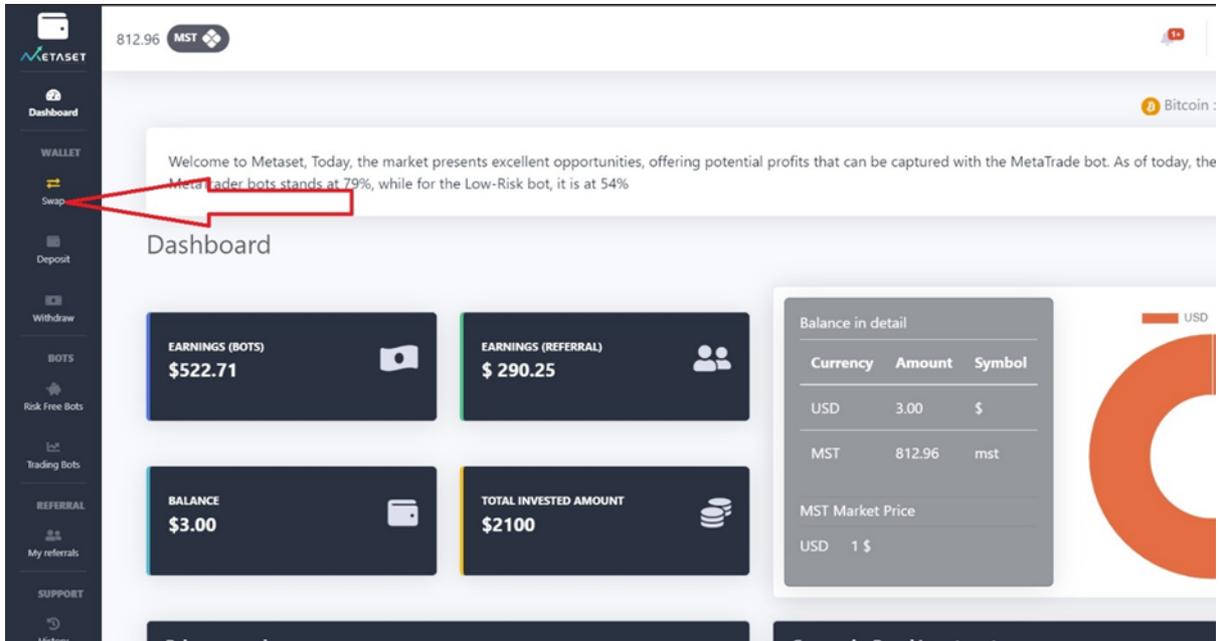

Each deposit takes between 3 to 20 minutes to be transferred to your account, depending on network traffic.

With over 1 million active users, Metaset has managed to earn the trust of its users and provide them with the best services. The company generates its revenue from a percentage of its customers' profits, not from their losses. This approach has allowed Metaset to consistently strive towards providing unparalleled services to its customers.

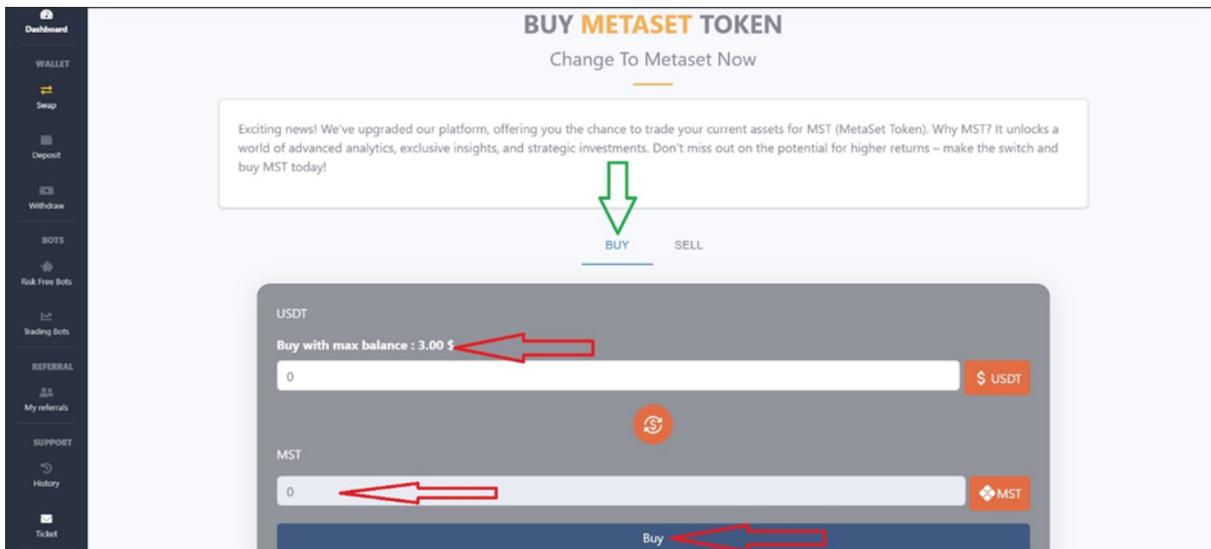

8. Tutorial: Swap

1. Click on the hamburger menu located at the top left corner of the website.

2. Select the "Swap" option from the menu.

3. On the new page, convert your desired amount from USDT to MST.

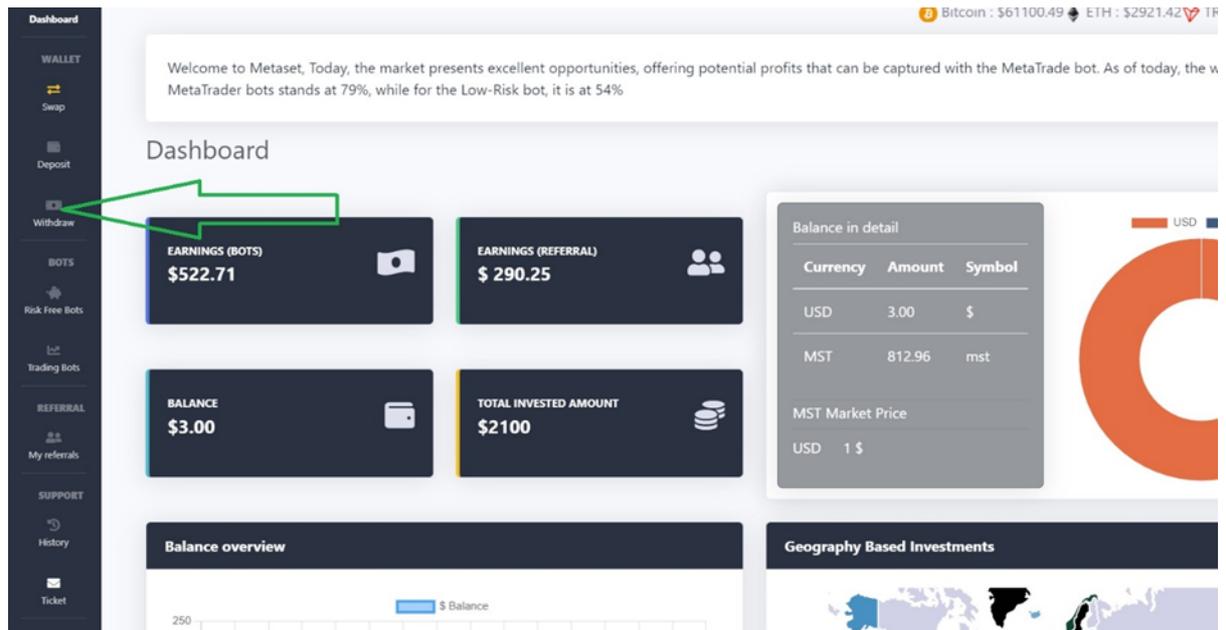

Please note that the price of each MST (Metaset Token) is always equivalent to \$1 and never changes. You do not pay any fees for this swap.

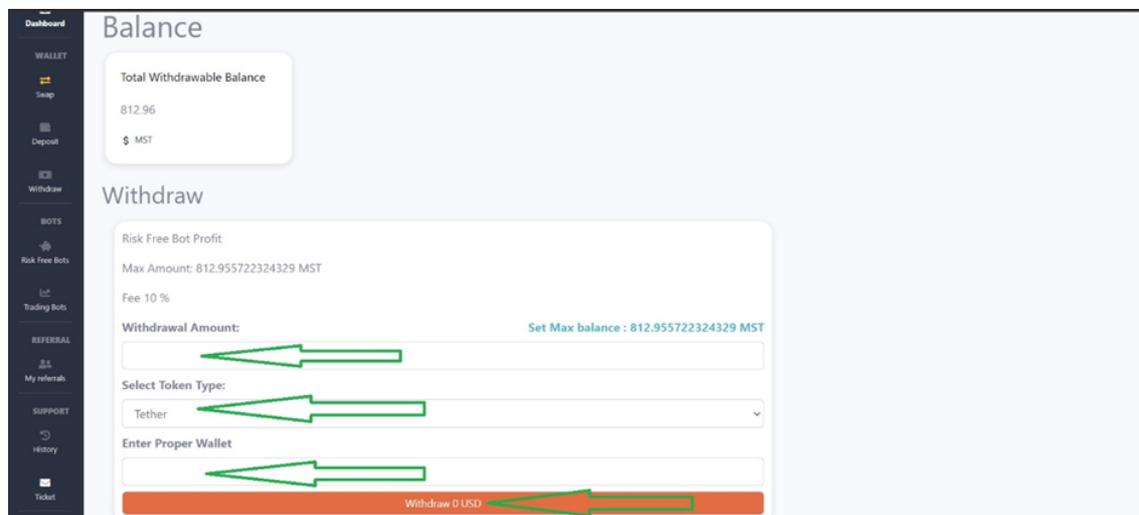

Note: All services and bots on the Metaset website operate with MST. Therefore, whenever you make a deposit, you need to convert your USDT Trc20 to MST in order to utilize the website's services.

9. Withdrawal Tutorial on Metaset:

1. Click on the hamburger menu located at the top left corner of the website.
2. Select the "Withdraw" option from the menu.

3. Enter your desired withdrawal amount in the "Withdrawal Amount" field.
4. Choose your withdrawal network in the "Select Token Type" field.
5. Input your wallet address in the "Enter Proper Wallet" field.
6. Finally, click on the "Withdraw" button. You will receive a confirmation message indicating that your withdrawal has been successfully submitted.

Note:

Withdrawals from your account on the Metaset website may take anywhere from 3 minutes to 24 hours, depending on network congestion. The minimum withdrawal amount is \$50.

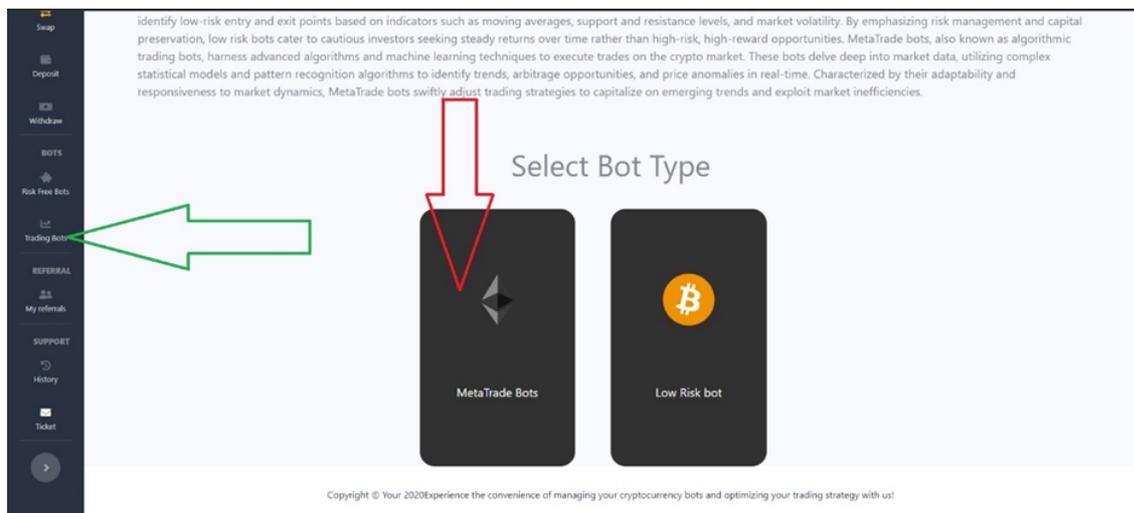

10. Identity Verification:

For added security and compliance with financial regulations, providing identification documents is required for transactions exceeding \$10,000. These documents typically include a copy of your passport or national ID card and your contact information. This measure is taken to prevent fraud and money laundering and to enhance security in financial transactions.

Conversely, for transactions below \$10,000, identity verification is not necessary. This allows you to withdraw smaller amounts freely without the need for identity verification.

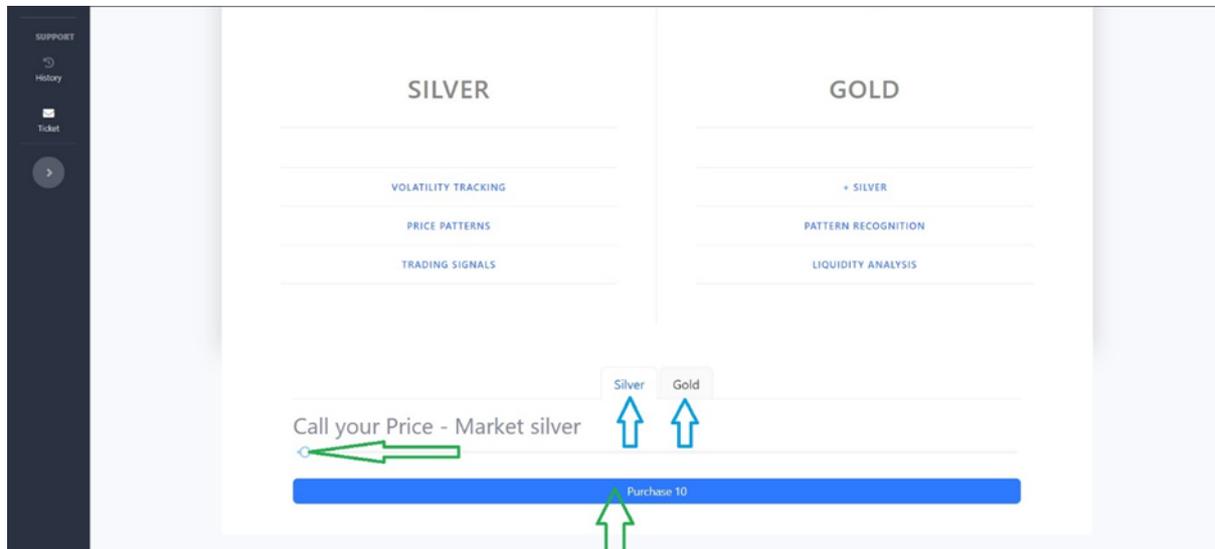

Additionally, it's worth mentioning that you can withdraw any amount above \$50 per day without any restrictions. This demonstrates Metaset's trust in you and its commitment to providing you with convenient and flexible withdrawal options.

11. Activating MetaTrade Bot:

1. Click on the hamburger menu located at the top left corner of the website.
2. Select the "Trading Bots" option.
3. On the new page, you will see the MetaTrade and Low-Risk bots. Click on the MetaTrade bot.
4. In the bot page, first select the type of bot you want, either Silver or Gold.
5. Then, use the slider to choose the amount for the bot.

6. Finally, click on the "Purchase" button. That's it! You have successfully activated your MetaTrade bot.

Note:

The difference between Silver and Gold trading bots in MetaTrade is as follows: The Silver bot only trades spot signals, while the Gold bot trades futures signals.

1. Each bot takes between 3 to 30 hours to complete your trades and report the results to you, depending on market fluctuations. After completing the trades, the bot's results will be displayed in the history section of that specific bot at the bottom of the page, and any profits will be added to your account if the signals are TP.

2. In the image below, green arrows indicate profit results, while red arrows indicate profit and loss results.

82405 f2ea3	15:53:10	0.02 BTC	\$1487.53
3a2c9 70590	15:53:10	0.00 BTC	\$362.80
04166 61056	15:53:10	0.00 BTC	\$0.40

2. The minimum amount to activate the MetaTrade bot is \$10.

3. You can activate the bot with any desired amount and frequency throughout the day. However, we recommend spacing out the activation of bots with a 2 to 3-hour interval between each activation.

Low-Risk bot

1. Click on the hamburger menu located at the top left corner of the website.
2. Select the "Trading Bots" option.
3. On the new page, you will see two bots: MetaTrade and Low-Risk. Click on the Low-Risk bot.
4. In the bot page, first select the type of bot you want: Silver, Gold, or All-Inclusive.

5. The minimum amount to activate the Low-Risk bot is \$50.
6. During the day, you can only activate one bot in each market, but we recommend that if you are a beginner AI trader, use the MetaTrade bot.

7. The win rate for the Low-Risk bot ranges from 54% to 58%, with the potential for profit of up to 250% and a minimum daily profit of 55%.

The Win Rate of the Low-Risk bot:

The win rate or win ratio of the Low-Risk bot indicates the percentage of successful trades out of all trades executed by the bot. For example, if the win rate of the Low-Risk bot is between 54% and 58%, it means that between 54% and 58% of the trades have resulted in profit.

The Risk-Reward Ratio (RRR) of the Low-Risk bot:

The Risk-Reward Ratio (RRR) is a measure that shows the potential profit relative to the amount of risk taken in a trade. In other words, if the potential profit is up to 250%, it means that for every unit of risk, the trader could potentially gain up to 2.5 times that amount if the trade is successful.

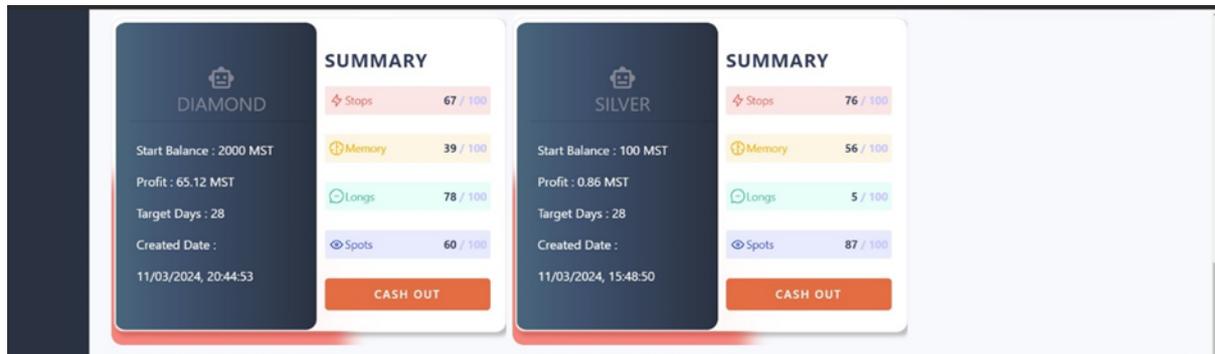

Therefore, with a win rate between 54% and 58%, a potential profit of up to 250%, and a minimum daily profit of 55%, the Low-Risk bot appears to have moderate risk and good profit potential. However, it is important to consider other factors such as proper risk management and strong trading strategies, which are generally decisive factors for success in financial markets.

Risk-free bot

1. Click on the hamburger menu located at the top left corner of the website. Select the "Free Risk Bots" option. On the new page, you will see four bots. Choose the type of bot you want by typing it: Silver, Gold, Platinum, or Diamond.

2. Then, select the amount for your bot and click on the "Purchase" button. That's it! You have successfully activated your Free Risk bot, and your bot starts generating profits right from the moment of activation.

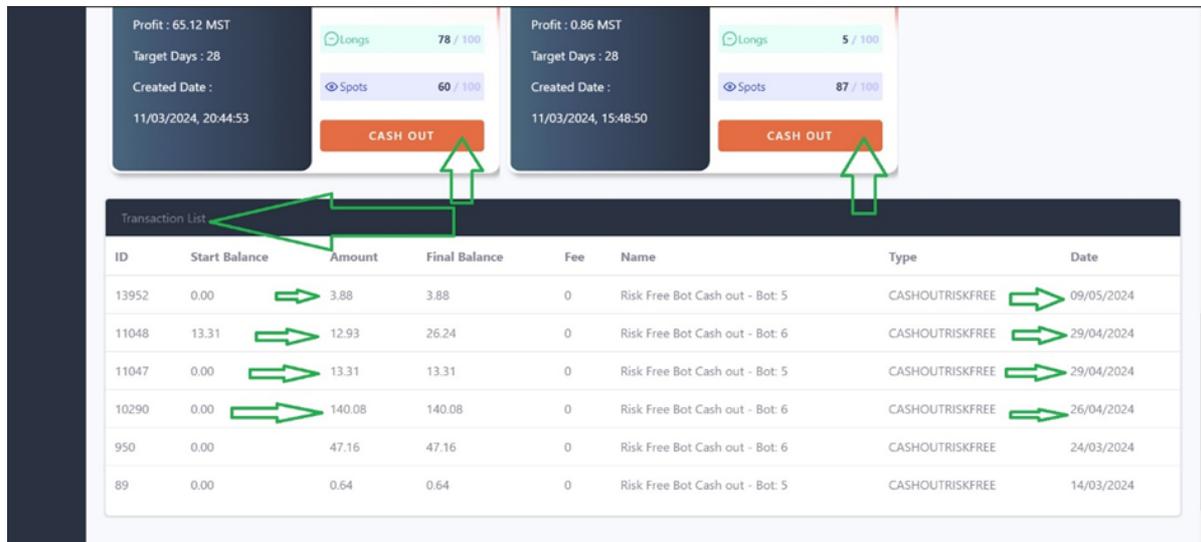

Note:

1. This bot provides you with monthly profits ranging from 10% to 15% and annual profits of 120% to 150%. You can withdraw your profits on a daily basis without any limitations by clicking on the "Cash Out" button, and your withdrawals will be recorded in the bot's history. You can accumulate your daily profits to earn consistently.

2. Arbitrage Trading is the process of simultaneously buying and selling an asset in different markets at different prices to exploit price differences. When the price difference between two different markets exceeds the transaction costs (including fees and other expenses), this arbitrage opportunity arises.

The Free Risk bot engages in Arbitrage Trading, meaning it identifies price differences between various digital currency exchanges in the shortest possible time using different algorithms and automatically executes buying and selling orders to profit from these price differences.

This process is typically performed at very high speeds due to the existence of price disparities in different markets, as the price differences may be very small, and there is a short window of opportunity to capitalize on them. This practice is commonly used in financial markets to improve market efficiency and balance prices across different markets.

ID	Start Balance	Amount	Final Balance	Fee	Name	Type	Date
13952	0.00	3.88	3.88	0	Risk Free Bot Cash out - Bot: 5	CASHOUTRISKFREE	09/05/2024
11048	13.31	12.93	26.24	0	Risk Free Bot Cash out - Bot: 6	CASHOUTRISKFREE	29/04/2024
11047	0.00	13.31	13.31	0	Risk Free Bot Cash out - Bot: 5	CASHOUTRISKFREE	29/04/2024
10290	0.00	140.08	140.08	0	Risk Free Bot Cash out - Bot: 6	CASHOUTRISKFREE	26/04/2024
950	0.00	47.16	47.16	0	Risk Free Bot Cash out - Bot: 6	CASHOUTRISKFREE	24/03/2024
89	0.00	0.64	0.64	0	Risk Free Bot Cash out - Bot: 5	CASHOUTRISKFREE	14/03/2024

- The minimum amount to activate the Free Risk bot is \$100, and the maximum is \$10,000.
- You can activate the bot with any amount you desire throughout the day, but we recommend not activating it with less than \$1,500.
- The approximate monthly profit with \$2,000 investment is between \$200 to \$250, which can be withdrawn daily or used for trading with other bots.
- Please note that the Free Risk bot is active for one year only and your capital will be traded in the market for one year. It cannot be directly cancelled from the website. If you wish to cancel the Free Risk bot, you can submit a ticket to the 24-hour support team for guidance. If the bot is not cancelled after 12 months, your principal amount will be automatically deposited into your account and can be withdrawn.

13. Collaborative trading referral (Referral Trading)

Partnership in trading

Yes, in Metaset AI, by acquiring partners through your partnership code or referral, you can benefit from the company's profits. This opportunity allows you to earn permanent income through attracting your subordinates and their successful trades.

By using your partnership code, introduce your subordinates to Metaset AI and get them involved in trading in financial markets. Every time your subordinates make successful trades and earn profits, you, as a partner, receive 1% of their successful trading volume permanently from the company's profits.

Profit Calculation for Sub-Affiliation:

Based on this example, let's break down the profit calculation:

1. Trading Volume: Each of your 100 partners conducts 2 successful trades per day, totalling 200 trades per day.
2. Profit Calculation: Since each trade contributes 1% of its volume to your profit as a referral commission, the total profit you earn per day can be calculated by summing up the 1% commission from each trade.
3. Withdrawal or Reinvestment: You have the flexibility to withdraw the earned referral commission at any time or reinvest it back into trading, depending on your preference and investment strategy.

To calculate the exact profit amount, you would need to know the total trading volume generated by your partners and then apply the 1% referral commission rate to it. This will give you the daily profit earned from sub-affiliation.

Method of Referral profit calculation

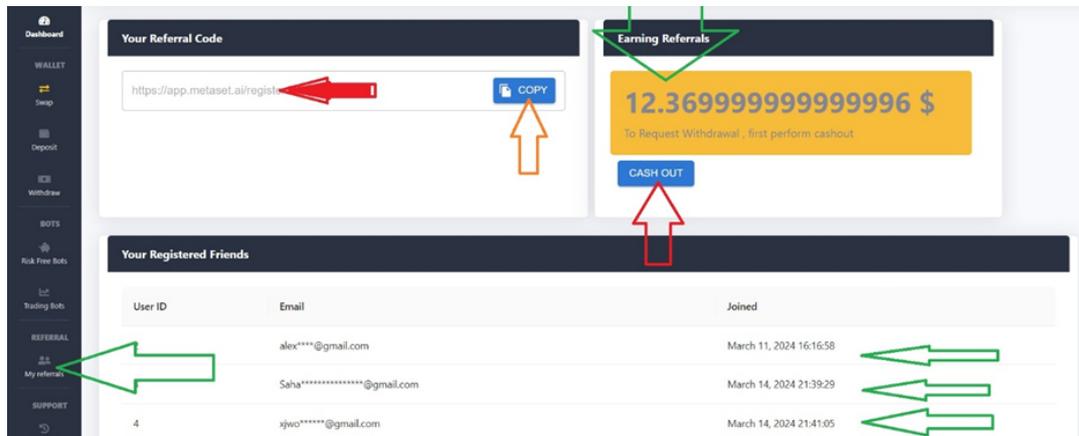

1. Calculate Total Trade Volume: Since each user makes 2 successful trades per day, with 100 users, the total number of trades per day would be 200.
2. Calculate Daily Earnings: Multiply the approximate earnings per trade by the total number of trades per day. In this case, the approximate earnings per trade range from \$0.50 to \$5.
 - Using the minimum earnings per trade (\$0.50):

$$\text{Daily Earnings} = \$0.50 * 200 = \$100$$

This means that in the minimum scenario, you could earn approximately \$100 per day from referral earnings.

MetaSt AI allows you to capitalize on the potential of successful traders in your network to achieve stable income.

With smart and engaging advertising, you can increase both the quantity and quality of your referrals, potentially raising your income significantly to reach a ceiling of \$1000 per day.

1. Click on the left menu of the site and select "My Referral." On the new page, click the "Copy" button to receive your referral link and share it with your friends via social media.
2. You can transfer your referral earnings to your Metaset account using the "CASH OUT" button and withdraw your earnings through USDT TRC20 or TRX without any limitations.
3. After clicking the "CASH OUT" button, your referral amount will be instantly added to the "Earning Referral" section on the dashboard.
4. At the bottom of the page, you can view a list of users along with their respective counts to have a better understanding of your marketing efforts.

14. Trade History

The screenshot shows the 'History' section of the Metaset dashboard. A green arrow points to the 'History' menu item on the left sidebar. The table below lists various transactions, including referral fees and bot trading results. Green arrows point to specific rows in the table, and blue arrows point to the date and time columns.

1. In the History section, you can transparently and distinctly check the results of your bots and referral earnings, along with all your actions, in real-time.

15. Optimal Timing to Initiate MetaTrader and Low-Risk Bots

This section is based on the analysis of the instructor...

Nowadays, many individuals in different countries are engaged in teaching MetaTrader and sharing their analyses. You can easily find these individuals on social networks or through Google searches and benefit from their tutorials and solutions. By utilizing these resources, you can become a professional AI Trader and educate partners and other novice traders. This process enables you to earn permanent profits from MetaSet company.

In financial markets, there are many opportunities for profitability, but alongside these opportunities, risks and the possibility of losses always exist. To succeed in these markets, having sufficient knowledge, proper planning, and effective risk management are crucial. Below are some important points regarding financial markets and risk management:

1. Diversification:

One way to reduce risk in financial markets is to diversify your investment portfolio. By spreading capital across different types of assets (such as stocks, bonds, real estate, gold, etc.), overall investment risk can be mitigated. This is because the decline in the value of one asset may be offset by an increase in the value of another.

2. Analysis and Research:

For successful investing, thorough analysis and research are essential. Using fundamental analysis (examining the intrinsic value of assets) and technical analysis (studying price patterns and trading volume) can help investors make informed decisions.

3. Risk Management:

Risk management is a fundamental element of any successful investment strategy. Some risk management tools include:

- Stop Loss: Setting a loss limit for trades so that if the price reaches a certain level, the trade is automatically closed.
- Position Sizing: Determining the appropriate size for each trade based on risk tolerance and capital size.

4. Continuous Education:

Financial markets are dynamic and complex, with conditions changing rapidly. Therefore, continuous education and staying updated on new market trends, innovative financial instruments, and investment techniques are of utmost importance.

5. Emotion Control:

One of the key factors in success or failure in financial markets is emotion control. Fear and greed are two emotions that can lead to poor decision-making. Having a disciplined plan and adhering to predetermined strategies can help mitigate the negative impact of these emotions.

6. Awareness of Laws and Regulations:

Awareness of the laws and regulations governing financial markets, including tax laws and trading regulations, is essential for every investor. This awareness can prevent legal and financial problems from occurring.

7. Utilizing Professional Advice:

If needed, seeking professional advice and leveraging the expertise of specialists can help investors make better decisions and manage their risks more effectively.

Conclusion

Investing in financial markets can present numerous lucrative opportunities, but along with these opportunities come risks and the possibility of losses. To succeed in these markets, having sufficient knowledge, proper planning, risk management, and emotional control are of paramount importance. By adhering to these principles, investors can engage more intelligently in financial markets and enhance their chances of success with the tools of artificial intelligence like MetaTrader.
